Q.11

Draw a tree diagram

Q.15

Pythagoras' theorem

Consider the three sides of the largest right-angled triangle.

$$\begin{aligned}
 & \sqrt{(2.4)^2 + \left(\frac{3 \times 2.4}{4}\right)^2} \\
 &= \sqrt{2.4^2 + 1.8^2} \\
 &= \sqrt{5.76 + 3.24} \\
 &= \sqrt{9} \\
 &= 3
 \end{aligned}$$
